PROFESSIONAL PROFILE

Backend Engineer with ~4 years of experience at a software services company, designing, building, and evolving distributed systems for client organizations. I own backend solutions end to end: API and data model design, resilient integrations, event-driven communication between services, performance tuning, and production reliability. I apply clean architecture, domain-driven design, and automated testing to deliver software that is maintainable, secure, and scalable.

CORE TECHNOLOGY STACK

Backend & APIs: Java, Spring Boot , Spring Security (OAuth2, JWT), Spring Data JPA/Hibernate, REST APIs, OpenAPI, Maven

Architecture & Design: Microservices, Hexagonal/Clean Architecture, SOLID, DDD, Transactional Outbox, Idempotency, Resilience4j

Data & Cloud: PostgreSQL, Redis, Flyway, AWS (ECS Fargate, RDS, S3, SQS, CloudWatch, Secrets Manager)

DevOps & Testing: Docker, GitHub Actions (CI/CD), Git, Micrometer/Actuator, JUnit 5, Mockito, Testcontainers, JaCoCo, SonarQube

PROFESSIONAL EXPERIENCE

Backend Developer (Mid-Level) | EFFICODE | Jul 2023 – Sep 2026

- **Technical ownership & modernization**: Owned the orders and payments modules of a 6-microservice order-to-cash platform built for a client (9-person Scrum team), leading the migration from Java 11 / Spring Boot 2.7 to Java 17 / Spring Boot 3.2 service by service, backed by integration tests and ~78% coverage.
- **Reliability & integrations**: Resolved a production incident (connection pool exhaustion under 3x traffic) in ~40 minutes, then redesigned the payment flow with external calls outside transactions, a circuit breaker, idempotent retries, and event-driven confirmation, so the next high-traffic campaign ran with no incidents.
- **Performance & automation**: Reduced p95 latency of the order listing endpoint from ~6s to ~0.4s over ~2 million rows through query and index optimization, pagination, and caching, and automated daily payment reconciliation, cutting finance effort from ~10 h to ~1 h per week.

Backend Developer (Junior) | EFFICODE | Jul 2022 – Jun 2023

- Developed REST APIs and business logic for the orders domain, including an idempotent order-creation endpoint that eliminated duplicate orders on client retries, with unit and integration tests and pull request reviews.

EDUCATION & CERTIFICATIONS

- **Systems Engineering – Universidad de La Guajira**
- **Software Development Diploma – MinTIC & Universidad del Norte**

LANGUAGES

- **Spanish:** native
- **English:** B1 (Intermediate)
